STORM Wax Block Rodenticide

GENERAL INFORMATION

STORM can be used both indoors and outdoors. Rats and mice that are resistant to warfarin are controlled and no prebaiting is required. A lethal dose is readily consumed in a single feed but death may not occur for up to seven days.

Do NOT place bait on or near exposed food or food utensils, food preparation areas or food storage areas.

DIRECTIONS FOR USE IN ALL STATES

RESTRAINTS

Do NOT exceed 3m between bait stations for mice, or 9m for rats.

Do NOT place baits in the open.

DIRECTIONS FOR USE

Rats: Select suitable bait locations, such as in active rat holes, along runs and under rubbish. Try to establish a barrier of bait locations between living and feeding areas. Place 12 STORM blocks at each bait location and 4 in each rat hole. Inspect the bait locations after 3 days and select new locations where there has been no take. Inspect again 4 days later and replace any blocks which have been eaten. Repeat the inspection of all bait locations at 7 day intervals, replacing fresh blocks only when blocks have been eaten and until all signs of rat activity have disappeared. Normally only 3 to 4 baiting rounds (pulses) are required.

Mice: Mice have very limited home ranges and do not need to drink. They are more difficult to control than rats because their feeding patterns are more erratic. Selection of bait locations is therefore even more important than for rats. Place 4 STORM blocks 2 metres apart in areas where activity is obvious, particularly where droppings are seen. In domestic premises, place 4 blocks in sheltered positions, inaccessible to children and pets, where mice are active such as under flooring, inside ceiling cavities, along pipe runs and conduits and behind skirting boards, furniture and appliances. Inspect bait locations and replace blocks as for rats until all signs of mouse activity have disappeared.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.
GENERAL INSTRUCTIONS
Baits should only be placed in areas frequented by the target pests and that are inaccessible to domestic animals, children, pets and wildlife and not liable to flooding. Alternative food sources should be removed or reduced as much as possible.

Protection of livestock, wildlife, fish, crustacea and others
This bait is hazardous to pigs, cats, dogs, poultry, bids and wildlife. Do NOT place baits in locations which are accessible to other animals or birds.
Do NOT contaminate ponds, streams, rivers or waterways with the bait or its used containers.
The product is restricted to use in and around buildings (within 2 metres) or enclosed spaces, eg drains.
In enclosed roof spaces and other areas where possums and other non-target animals frequent, baits should be placed in proper bait stations, i.e. plastic jars or plastic tubes.
The use of this product for the control of protected native rodents requires permission from wildlife authorities.

Storage and disposal, protection of others
Store in the closed original container in a safe place. Containers which have held bait should not be used for any other purpose. Pest Control Operators should dispose of empty containers, used bait stations and unused or untaken bait by burying in an approved dump. In a domestic situation, minimise the presence of excess baits. Where unused baits are in good condition, return to original container for reuse. For empty containers, damaged or unwanted baits, wrap securely and dispose of in household refuse bin.
Look for dead rats or mice and bum or bury them. Do NOT place in refuse bins or rubbish tips.
Ensure baits are removed when rodent activity has ceased.

SAFETY DIRECTIONS
Poisonous if swallowed. When using the product, wear elbow-length PVC gloves. If on skin and after each baiting, wash thoroughly with soap and water. After each day’s use, wash gloves. Vitamin Kl(phytomenadione) is antidotal.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre.
NOTE TO PHYSICIAN
The active constituent flocoumafen is an indirect blood anticoagulant. Ingestion of a relatively large quantity of bait would be required before a toxic effect is expected. In general, an increased tendency to bleed could indicate poisoning. Vitamin K₁ (phytomenadione) is antidotal. In cases of suspected poisoning, determine prothrombin time not less than 18 hours after consumption. If elevation has occurred, administer Vitamin K₁, intravenously in divided doses, 40mg for adults, 20mg for children daily. Treatment may be required daily for several weeks. Withdraw antidote with care and monitor prothrombin times continuously for 4 days or more after such withdrawal.

DOMESTIC ANIMAL POISONING
In cases of accidental poisoning by STORM consult a veterinarian who will advise of suitable Vitamin K₁ antidote therapy.

MSDS
Additional information is listed in the Material Safety Data Sheet.

WARRANTY
This product is designed only to be used in accordance with the label directions which reflect the opinion of experts based on field use and tests. If it is so used, Cyanamid Agriculture Pty. Limited warrants its effectiveness, but takes no responsibility whatsoever for the consequences of the user failing to follow these directions exactly.
